

## “How to setup a Dial-Up connection in XP...”

To setup a dial-up connection to the Internet on a computer equipped with the Microsoft Windows XP Operating System, please follow these steps...

From the Start menu, select the Control Panel.

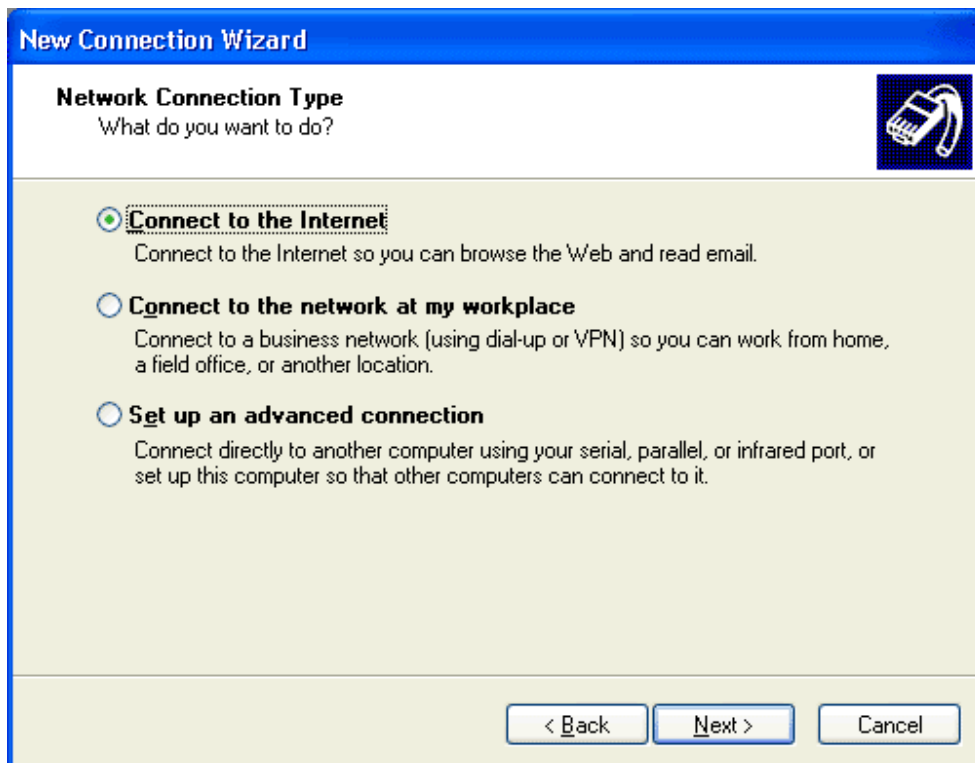

Locate the Network Connections icon on the Control Panel. Note: If you do not see the Network Connections icon... click on the Select Classic View on the left hand window pane.

Double click on the Network Connection icon. This opens the Network Connection window.

Click on the File menu, at the top of the Network Connection window, and select New Connection. The computer then starts the New Connection wizard.

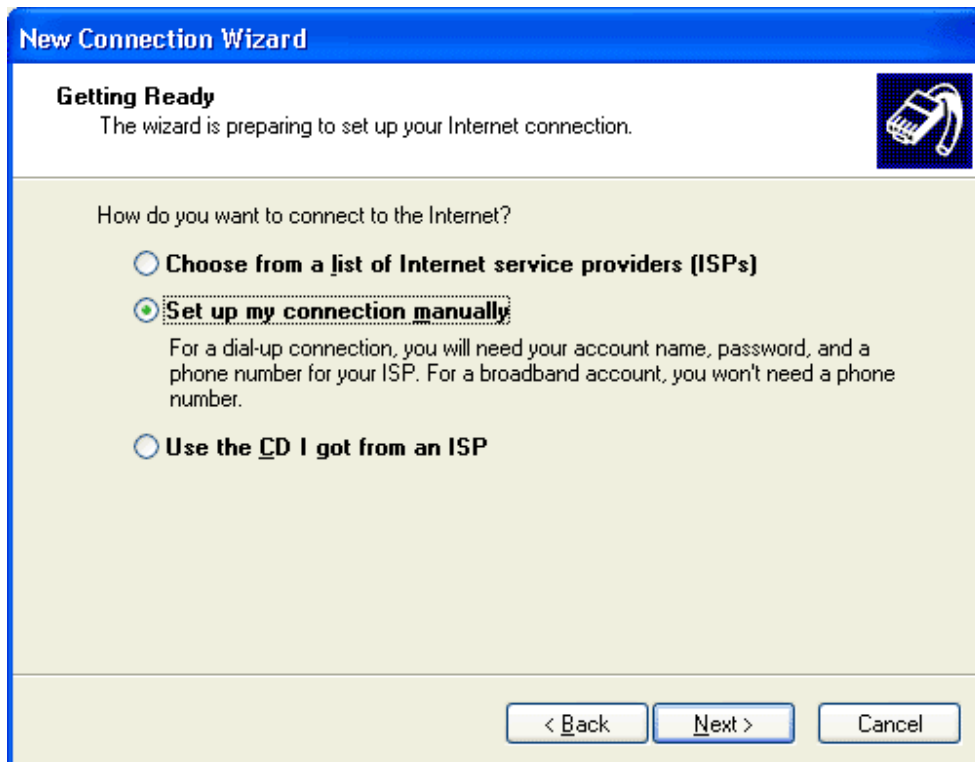

Click Next on the first screen shown by the New Connection Wizard.

Select Connect to the Internet as shown in the picture on the below then click on Next to continue.

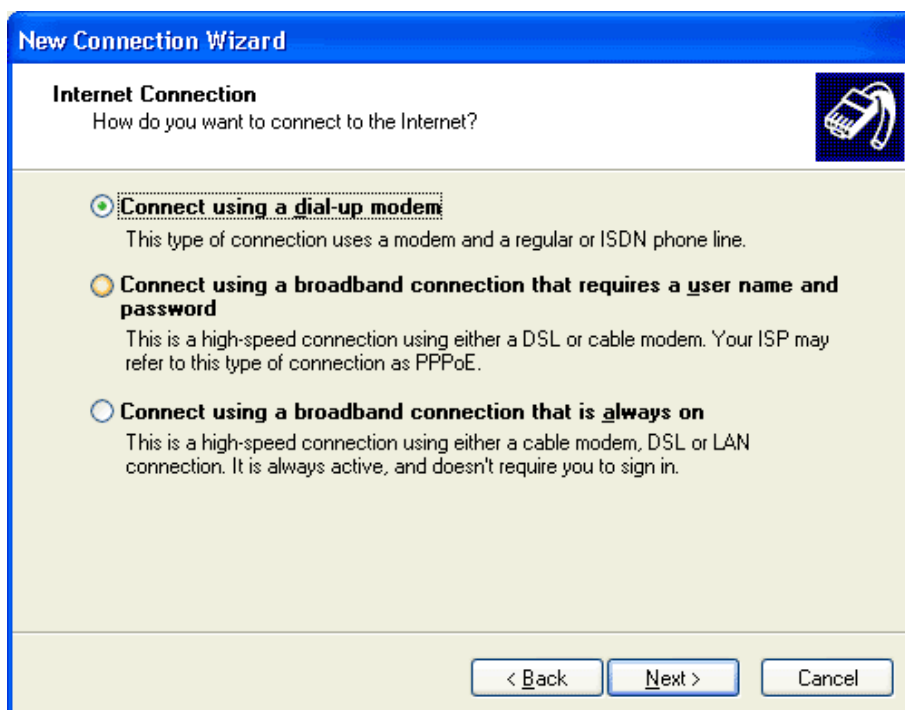

Select ***Set up my connection manually.***

Then click on **Next** to continue.

Select Connect using a dial-up modem.

Then click on **Next** to continue.

**New Connection Wizard**

**Connection Name**  
What is the name of the service that provides your Internet connection?

Type the name of your ISP in the following box.

ISP Name

The name you type here will be the name of the connection you are creating.

< Back   Next >   Cancel

Type in **TRONDATA**. Then click on **Next** to continue.

**New Connection Wizard**

**Phone Number to Dial**  
What is your ISP's phone number?

Type the phone number below.

Phone number:

You might need to include a "1" or the area code, or both. If you are not sure you need the extra numbers, dial the phone number on your telephone. If you hear a modem sound, the number dialed is correct.

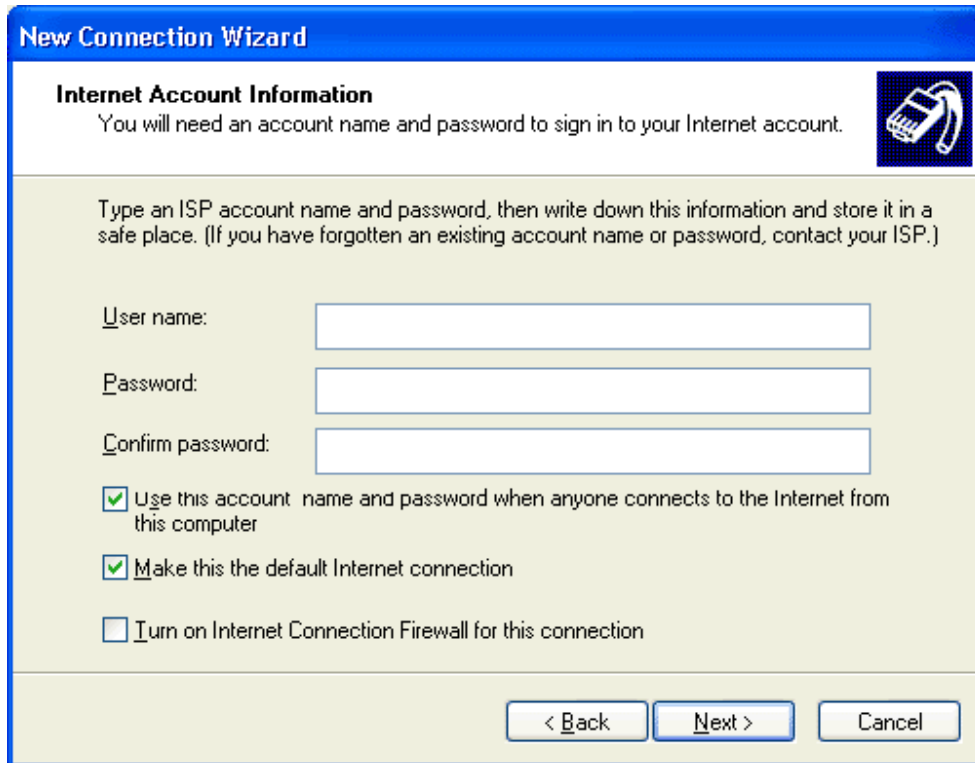

< Back   Next >   Cancel

Type in the local access number for your area.

If Cornwall is a local call for you, enter: **613-932-3941**

Pay special attention to the number you enter here as the format of the number you enter **MUST** be proper for your dialing area.

Click on Next to continue once you have entered your local access number.

The screenshot shows a Windows-style dialog box titled "New Connection Wizard" with a blue header. Below the header, the title "Internet Account Information" is displayed in bold. A sub-header reads: "You will need an account name and password to sign in to your Internet account." To the right of this text is a small icon of a hand holding a telephone receiver. Below this, a paragraph of instructions says: "Type an ISP account name and password, then write down this information and store it in a safe place. (If you have forgotten an existing account name or password, contact your ISP.)" There are three text input fields: "User name:", "Password:", and "Confirm password:". Below the fields are three checkboxes: the first two are checked and labeled "Use this account name and password when anyone connects to the Internet from this computer" and "Make this the default Internet connection"; the third is unchecked and labeled "Turn on Internet Connection Firewall for this connection". At the bottom right, there are three buttons: "< Back", "Next >", and "Cancel".

Type in your User Name. User names on our system consist of a prefix string, a user ID string and a suffix string.

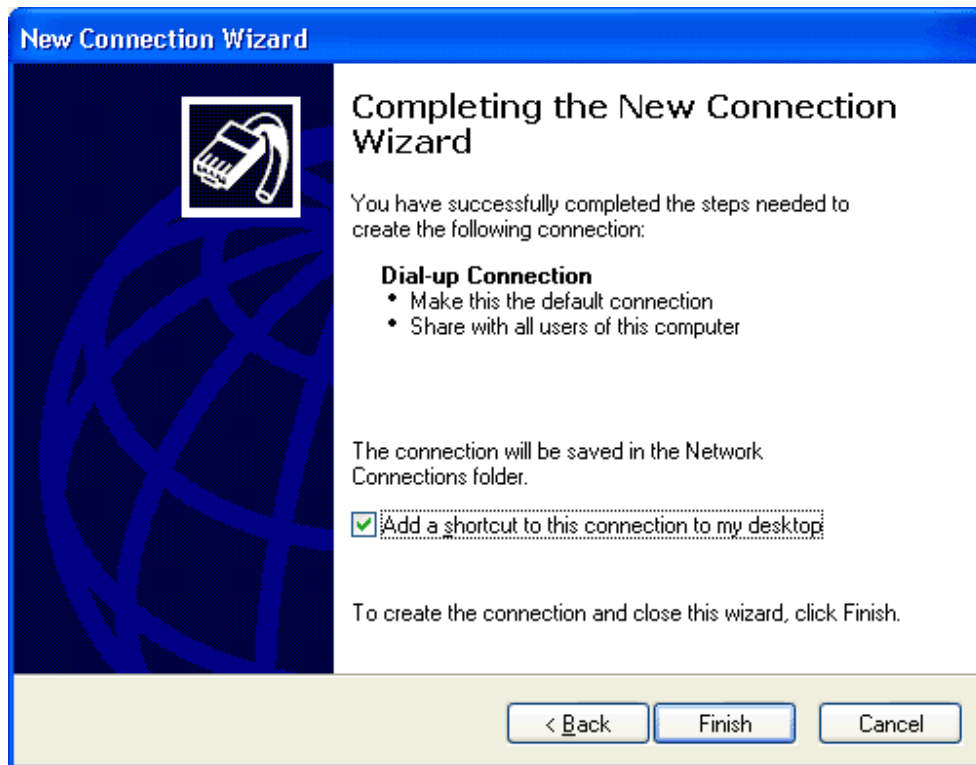

For example... **idm/trondata/username@trondata.net**

Type in the Password you selected when you registered for your TronData Internet account.

Type in the Password, once again, to verify the information.

Click on the top two selection boxes to turn on those features. If you have no other firewall software active on your computer you may want to enable the last selection box.

Click on **Next** to continue once you have entered all of the required information and selected the appropriate options.

Click the **Add a Shortcut to this Connection** selection box if you would like a desktop short cut to be created.

Click on Finish to complete the New Connection Wizard.

Windows XP is now configured for your Dial-Up connection.
